

CREEK MOSQUE DUBAI, UAE
RAW-NYC ARCHITECTS. DESIGN DIRECTOR: RAYA ANI

Creek Mosque design gives an iconic contemporary perspective of its Islamic, Arabic and Dubai heritage in its dramatic fusion of the sea shell and the dome shape. The shell structure houses the main prayer hall that accommodates 7,500 prayers. The overall shape of the mosque has a higher point on the North side, to the right of the Mihrab wall, referencing the height of minarets typically used in traditional Mosque designs. The peak point of the structure references the high point of the Minaret.

ASPIRE SPORTS COMPLEX DOHA, QATAR
RAW-NYC ARCHITECTS. DESIGN DIRECTOR: RAYA ANI

The concept of the Sidra tree is expressed in the ever-expanding trunk, roots and branches connecting all aspects of the building inside and out. The roof, facades and the interior are woven together by the growth of the tree trunk and branches, which in turn support the structure. The two soccer field courts are placed within a square volume where light is filtered between the branches of the roof, providing an experience similar to lying underneath a tree.

GUGGENHEIM MUSEUM HELSINKI, NETHERLANDS
RAW-NYC ARCHITECTS. DESIGN DIRECTOR: RAYA ANI

The museum is designed as a series of volumes to address the park and the city on one side and the harbor on the other, complementing the overall cityscape. The peaks and dips of the form are carefully orchestrated to maintain the views. The three carved out volumes: the Garden of the Public, the Garden of Reflection, and the Garden of Sculpture, are the backbone of the museum, where the natural flow of the park travels organically through the museum and to the harbor.
